SUMMARY

Computer Engineering graduate and former Business Analyst who builds full-stack web apps with React, TypeScript, Django, and PostgreSQL, seeking a full-time position for Software Engineering. Brings 5 years of experience on Agile teams at Tufts Health Plan supporting the SDLC through requirements and user acceptance testing.

EDUCATION

Wentworth Institute of Technology | B.S. in Computer Engineering — Sept 2015 – Aug 2019

SKILLS

Languages: Python, Java, SQL, TypeScript, JavaScript, HTML, CSS
APIs & Frameworks: REST APIs, Django REST Framework, Flask, React, Next.js, Tailwind CSS, Recharts
Databases & ORM: PostgreSQL, MySQL, Prisma, Supabase
Tools & Deployment: Git, GitHub, GitHub Copilot, JWT authentication, Vercel, Render, Jira Align
Practices: SDLC, test case execution, automated API testing, UAT, data structures & algorithms, SAFe Agile

EXPERIENCE

Tufts Health Plan | Remote — **Feb 2021 – May 2026**

Business Analyst — Nov 2021 – May 2026

- Executed vendor-supplied UAT test cases across quarterly Program Increments, verifying functionality against acceptance criteria and identifying defects
- Worked with a product owner and fellow business analysts in a SAFe Agile environment, maintaining Jira Align user stories and tracking feature delivery timelines
- Participated in sprint demos and planning to confirm deliverables met the Definition of Done

Sales Admin Associate — Jun 2021 – Nov 2021

- Generated and analyzed business reports in Cognos to support sales operations and decision-making
- Supported Salesforce data cleanup and migration initiatives to improve data integrity

Product Engine Plan Builder — Feb 2021 – Jun 2021

- Configured healthcare plan structures and mapped complex health benefits in a product engine
- Analyzed spreadsheet-based data and accurately entered it into enterprise software to support plan implementation

PROJECTS

Family Dashboard — *React, TypeScript, Supabase, Tailwind CSS*

- Built a family dashboard tablet with a monthly calendar (event CRUD, holiday markers), a home-maintenance log, and a weather panel using React, TypeScript, Vite, and Tailwind CSS
- Integrated the National Weather Service API for forecasts and severe-weather alerts plus Open-Meteo location search; backed by Supabase PostgreSQL with sign-in and row-level security isolating each household's data

Budget Tracker | Live Demo — *React, TypeScript, Django, PostgreSQL*

- Built a budget tracking app with JWT-authenticated user accounts and full CRUD for transactions, categories, and budgets; frontend deployed on Vercel and API on Render
- Designed a PostgreSQL-backed REST API that performs all financial aggregation server-side for accuracy, and built a responsive, dark-themed dashboard with Tailwind CSS and Recharts for real-time budget and spending visualizations
- Wrote automated API tests covering input validation and per-user data isolation, so users can only access their own categories and budgets

Altura Market | Live Demo — *Next.js, React, TypeScript, Prisma*

- Built a Poké Mart inspired by Pokémon for similar sales transactions, dynamic pricing and limited-time sales, a shopping cart, and a checkout flow powered by Next.js server actions; deployed on Vercel
- Integrated the PokéAPI, fetching items in batches of 20 with failure handling, and stored the catalog as a single-row upsert to prevent race conditions when it is regenerated
- Designed a Prisma + PostgreSQL schema with cookie-based sessions and transaction history, and built a responsive, mobile-first UI with Tailwind CSS and React Context for real-time state
